Password Security

Learning objectives

By the end of this module, you will be able to:

- Discuss the risks of weak passwords
- List the guidelines for setting and managing passwords
- Describe some Password Security Best practices

Password Security

Introduction

Passwords are a method to validate users who attempt to access a system or resources, and ensure they are authorised to do so.

It acts as a first line of defence in a security system.

Passwords protect:

- ATMs and bank accounts
- Critical infrastructure systems
- Company proprietary information and systems
- Corporate email accounts
- Personal information

Password Security

Risks of a weak password

Password Security

Risks of a weak password

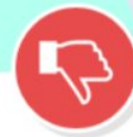

Password Security

Creating a secure password

Dos

- Use both upper and lower case characters (e.g. a-z, A-Z)
- Include numbers and special characters as well as letters e.g. 0-9, !@#\$%^&*()_+|~-=\`{}[]:;';<>?.,./
- As a general good practice, create passwords that are at least:
 - Eight characters long (for regular use)
 - Minimum 10 character long (for administrative purposes)

Don'ts

- Don't create passwords that are based on personally identifiable information such as birthdates, mobile numbers or names of family members
- Don't use the same password for multiple user accounts, or for both personal and professional purposes
- Do not use words that can be found in dictionaries – even foreign language dictionaries

Password Security

Managing your password

Dos

- Always regard your password as confidential information, that should NEVER be disclosed to anyone
- Always change your password immediately if you think it has been revealed or compromised
- Avoid using the "Remember Password" feature of applications (e.g. web browsers, Outlook, etc)

Don'ts

- Do not, under any circumstance, share your password with anyone, even IT engineers, close co-workers or family members
- Never reveal your password in conversations, security forms, emails or any other form of electronic or verbal communications
- Never write down your password anywhere

Password Security

Best practices

Key rules to remember:

- 1** Use strong passwords
- 2** Follow the organisational guidelines for passwords
- 3** Do not write your password on paper media like post it note, diaries, workbooks, note pads etc
- 4** Do not disclose your password to anyone
- 5** Do not use easy to guess passwords
- 6** Avoid using names or any other easily guessable common nouns in the password
- 7** Use alphanumeric password with at least one special character
- 8** Logout from all accounts and shut down computers before leaving office every day

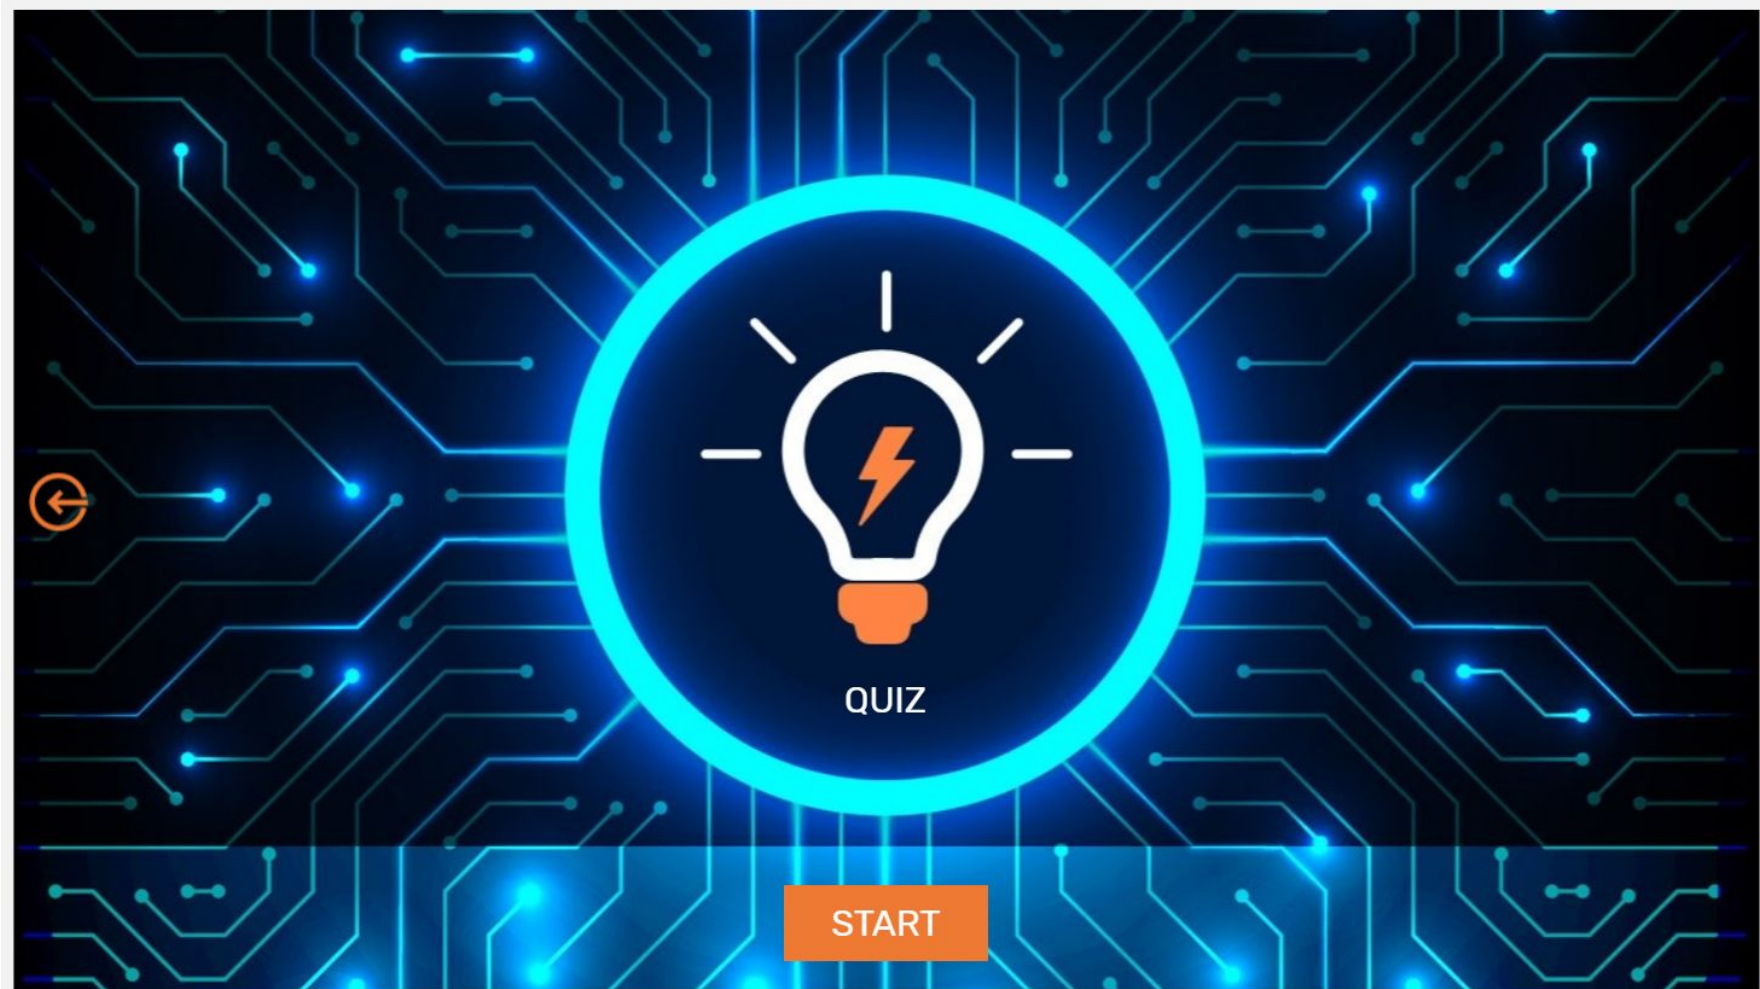

Password Security

Summary

- Passwords are the first line of defence against unauthorised access
- Using weak passwords for systems make it easier for persons with malicious intent to access your system and can in turn lead to theft, corporate espionage and vandalism
- Using a strong password and following the organisation's guidelines for setting and managing passwords help keep your account secure
- Following the best practices will ensure that the risk of your password being revealed is kept to a minimum

Password Security

Password Security

Smith is travelling to Europe for a client meeting. Liza, his colleague, calls him for his username and password to access important documents that are stored only on his PC. They have been working together on a project for a couple of months. What should Smith do in this situation? Select the most appropriate option and click Submit.

- ☐ Realise the urgency of the request and give his details to Liza, whom he trusts
- ☐ Share his details with manager and request him to delete the email once the documents are obtained
- ☒ Politely refuse to give the password, stressing that Liza must comply with the policies

Password Security

○ If passwords are weak and easily broken...

- Other security controls may be made ineffective which will impact the security of information resources
- The security of information resources is directly affected, which is linked to the security of the organization
- Unauthorised users can illegally obtain, modify or destroy organisation's confidential information
- Confidential information may be exposed to unauthorised users causing personal, financial or reputational damage to the owner
