Physical Security

Welcome to this module on
PHYSICAL SECURITY

Physical Security

Learning objectives

By the end of this module, you will be able to:

- Identify the threats to physical security
- Understand consequences of lapses in physical security
- Understand the measures of physical security
- Know the best practices

Physical Security

Introduction

Physical security is the protection of:

Personnel

Hardware

Software

Networks

Data

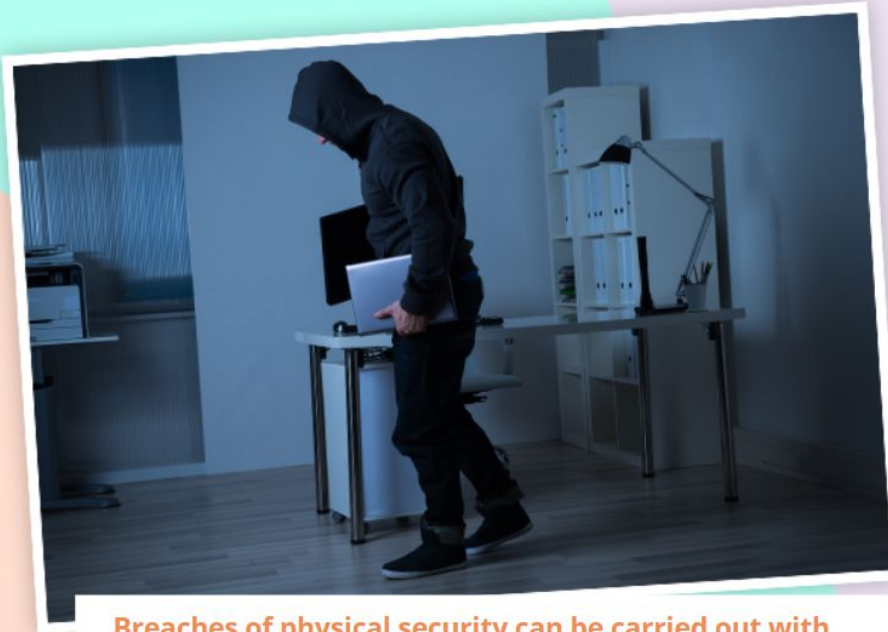

...from physical actions and events that could cause serious loss or damage to the organisation.

Physical Security

Introduction

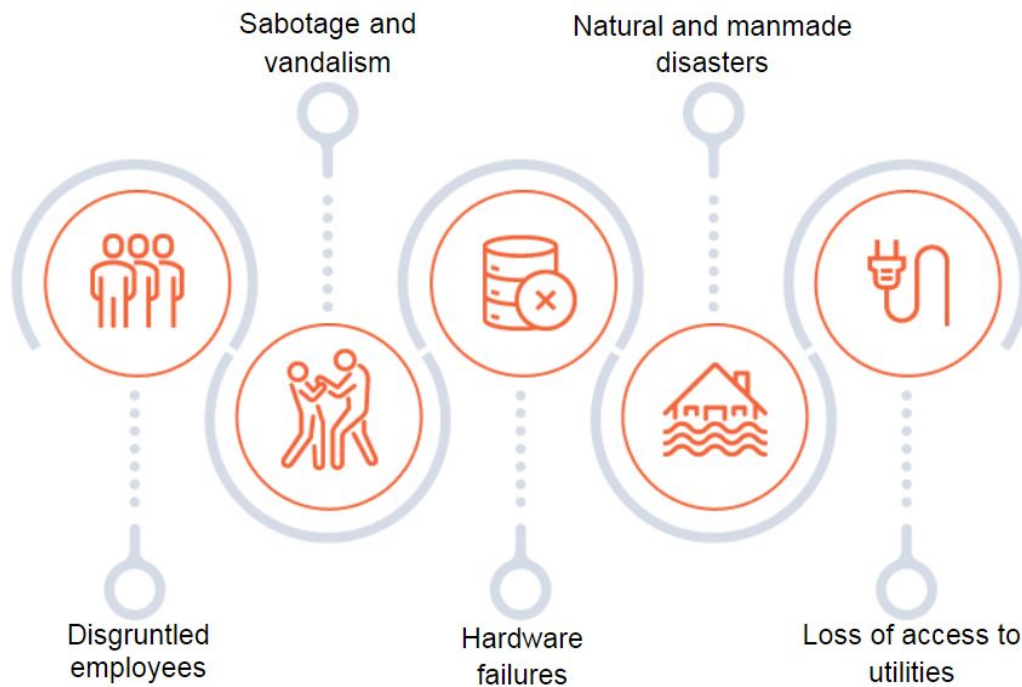

Breaches of physical security can be carried out with brute force and little or no technical knowledge on the part of an attacker.

Physical Security

Threats to Physical Security

The physical security of an organisation can come under threat by the following factors:

→ Click each threat to learn more.

Physical Security

The screenshot shows a presentation slide titled "Threats to Physical Security". The main text on the slide states: "The physical security of an organisation can come under threat by the following factors:". Below this text, there are three categories of threats: "Disgruntled employees", "Hardware failures", and "Loss of access to utilities". A modal window is open over the "Disgruntled employees" category, listing four points: employees have maximum access and can subvert security; negligence or deliberate acts can cause major damage; not following policy can result in a breach; and training is necessary for end-user level controls.

Threats to Physical Security

The physical security of an organisation can come under threat by the following factors:

Click each threat to learn more

Disgruntled employees

- Employees of an organisation have maximum access to the organisation's infrastructure. As such they can, knowingly or unknowingly, subvert even the most intelligently designed security system
- Negligence or deliberate act of an employee can cause major damage to an organisation's assets
- Not following physical security policy may result in security breach
- Hence, it is necessary to train all employees to follow end user level physical security controls like entry-exit, access control, visitor management, locking of secure areas, material movement, evacuation measures, etc.

Disgruntled employees Hardware failures Loss of access to utilities

Physical Security

The screenshot shows a presentation slide titled "Threats to Physical Security". The slide content includes the text "The physical security of an organisation can come under threat by the following factors:" followed by a list of threats. A modal window titled "Sabotage and vandalism" is open, displaying four bullet points. The background of the slide is dark grey with a blue header bar. The modal window has a blue header bar and a white body. Navigation arrows are visible on the left and right sides of the slide.

Threats to Physical Security

The physical security of an organisation can come under threat by the following factors:

Click each threat to learn more

Sabotage and vandalism

- If a disgruntled/forcefully terminated employee is leaving the organisation, he or she should be escorted out of the premises immediately after they have returned all organisation equipment
- If unauthorised individuals gain access to the organisation's premises, they may be able to gain access to confidential information and secure areas or cause harm to its employees
- Corporate espionage could lead to sabotage of key systems if not secured with proper physical security level access controls
- Local acts of riots or strikes can cause damage to organisation's property due to vandalism

Disgruntled employees Hardware failures Loss of access to utilities

Physical Security

Threats to Physical Security

The physical security of an organisation can come under threat by the following factors:

Click each threat to learn more

Hardware failures

- Hardware failures are inevitable
- To minimise the damage caused by such failures, regular maintenance of critical equipment and backups of important data should be maintained

Disgruntled employees

Hardware failures

Loss of access to utilities

The diagram illustrates three threats to physical security. Each threat is represented by a red circular icon with a white symbol inside, connected by a dotted line to a label below. The first icon shows two figures, one holding the other, representing 'Disgruntled employees'. The second icon shows a house with a lightning bolt, representing 'Hardware failures'. The third icon shows a house with wavy lines below it, representing 'Loss of access to utilities'. A blue modal box is overlaid on the 'Hardware failures' icon, providing more details about this specific threat.

Physical Security

The screenshot shows a presentation slide titled "Threats to Physical Security". The main text on the slide states: "The physical security of an organisation can come under threat by the following factors:". Below this text, there is a pop-up window titled "Natural and man-made disasters" which contains a list of three items. The background of the slide is dark grey with some faint icons and text visible through the pop-up.

Threats to Physical Security

The physical security of an organisation can come under threat by the following factors:

Click each threat to learn more

Natural and man-made disasters

- Natural disasters include earthquakes, fire, tsunamis, epidemics, sandstorms, typhoons and so on
- Man-made disasters include terrorism, arson, riots, burglary, theft and so on
- These disasters can cause severe damage to the organisation if the facility is not built and equipped to handle these events

Disgruntled employees

Hardware failures

Loss of access to utilities

Physical Security

Threats to Physical Security

The physical security of an organisation can come under threat by the following factors:

Click each threat to learn more

Loss of access to utilities

- Utilities is a term which describes the useful features such as electricity, air, water, transportation means, etc.
- Loss of power may cause critical components to go down and also lead to data losses
- Hence, it is important to have power backups, safety measures to protect key utility installations across the organisation

Disgruntled employees

Hardware failures

Loss of access to utilities

Physical Security

What is expected of you?

The following precautions must be taken by everyone to ensure the security of the organisation:

Dos

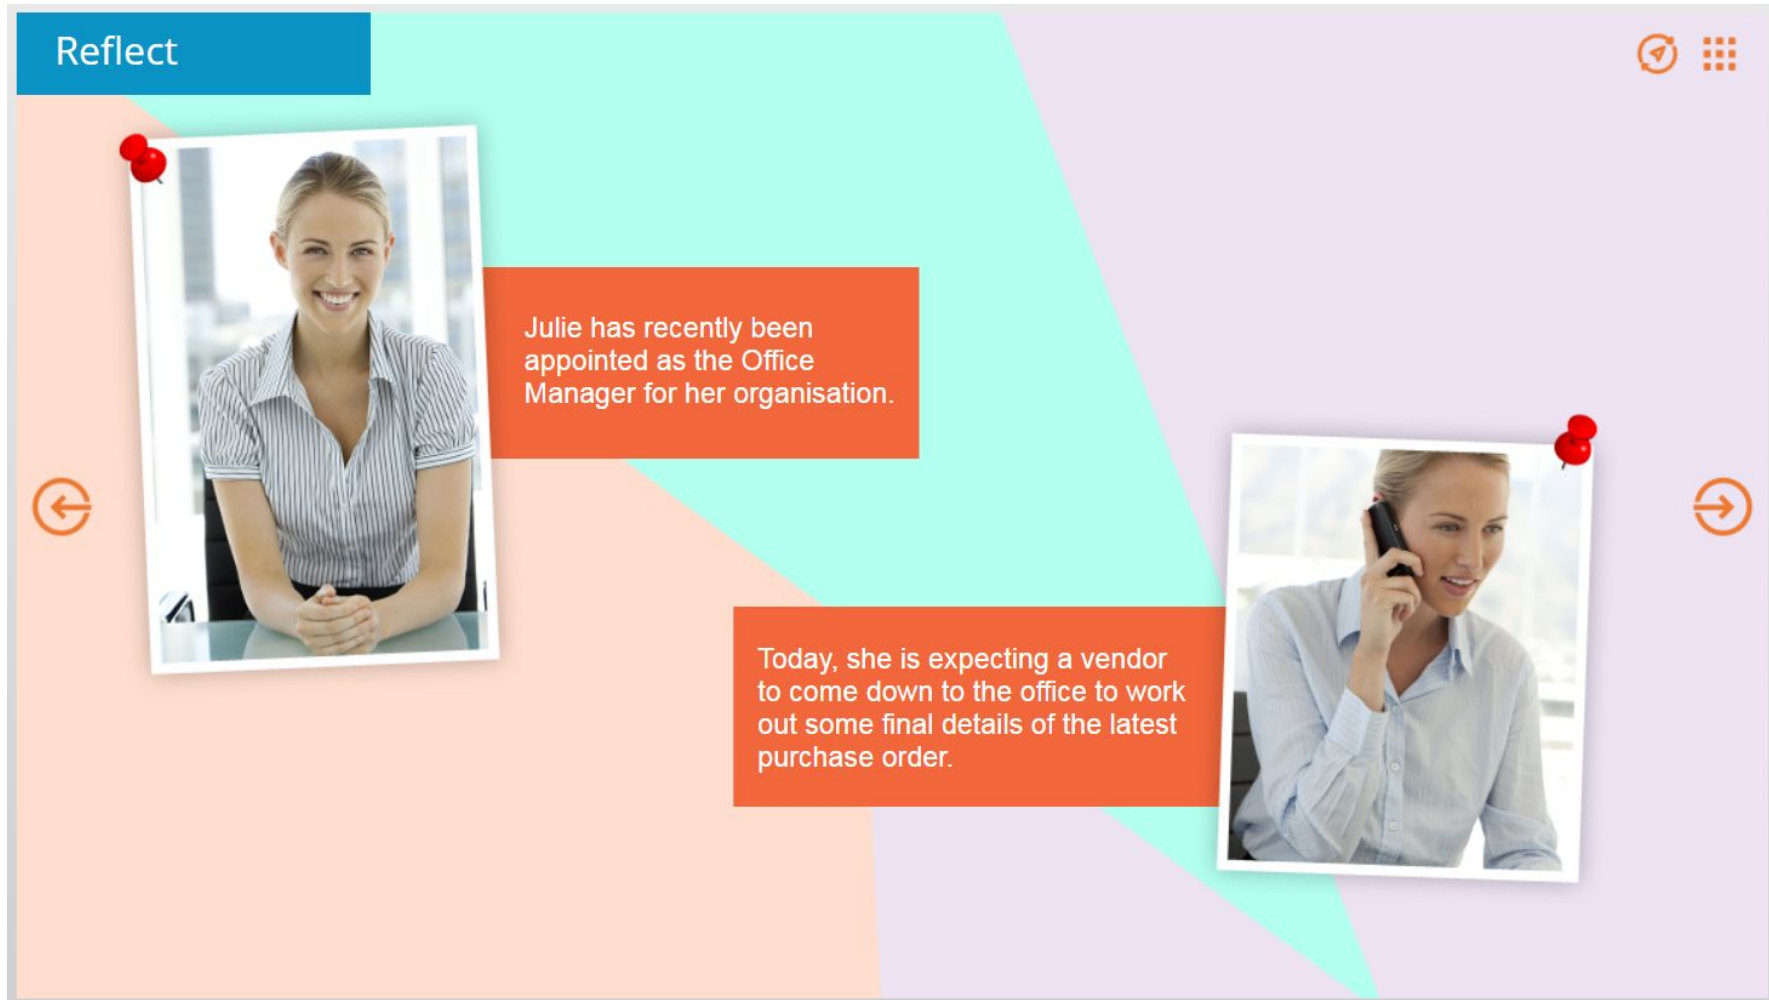

- Know the locations of the secure areas in your organisation
- Always use organisation provided ID at the workplace
- Always report any suspicious visitor movement to security in charge
- Always follow entry-exit procedures for employees and visitors

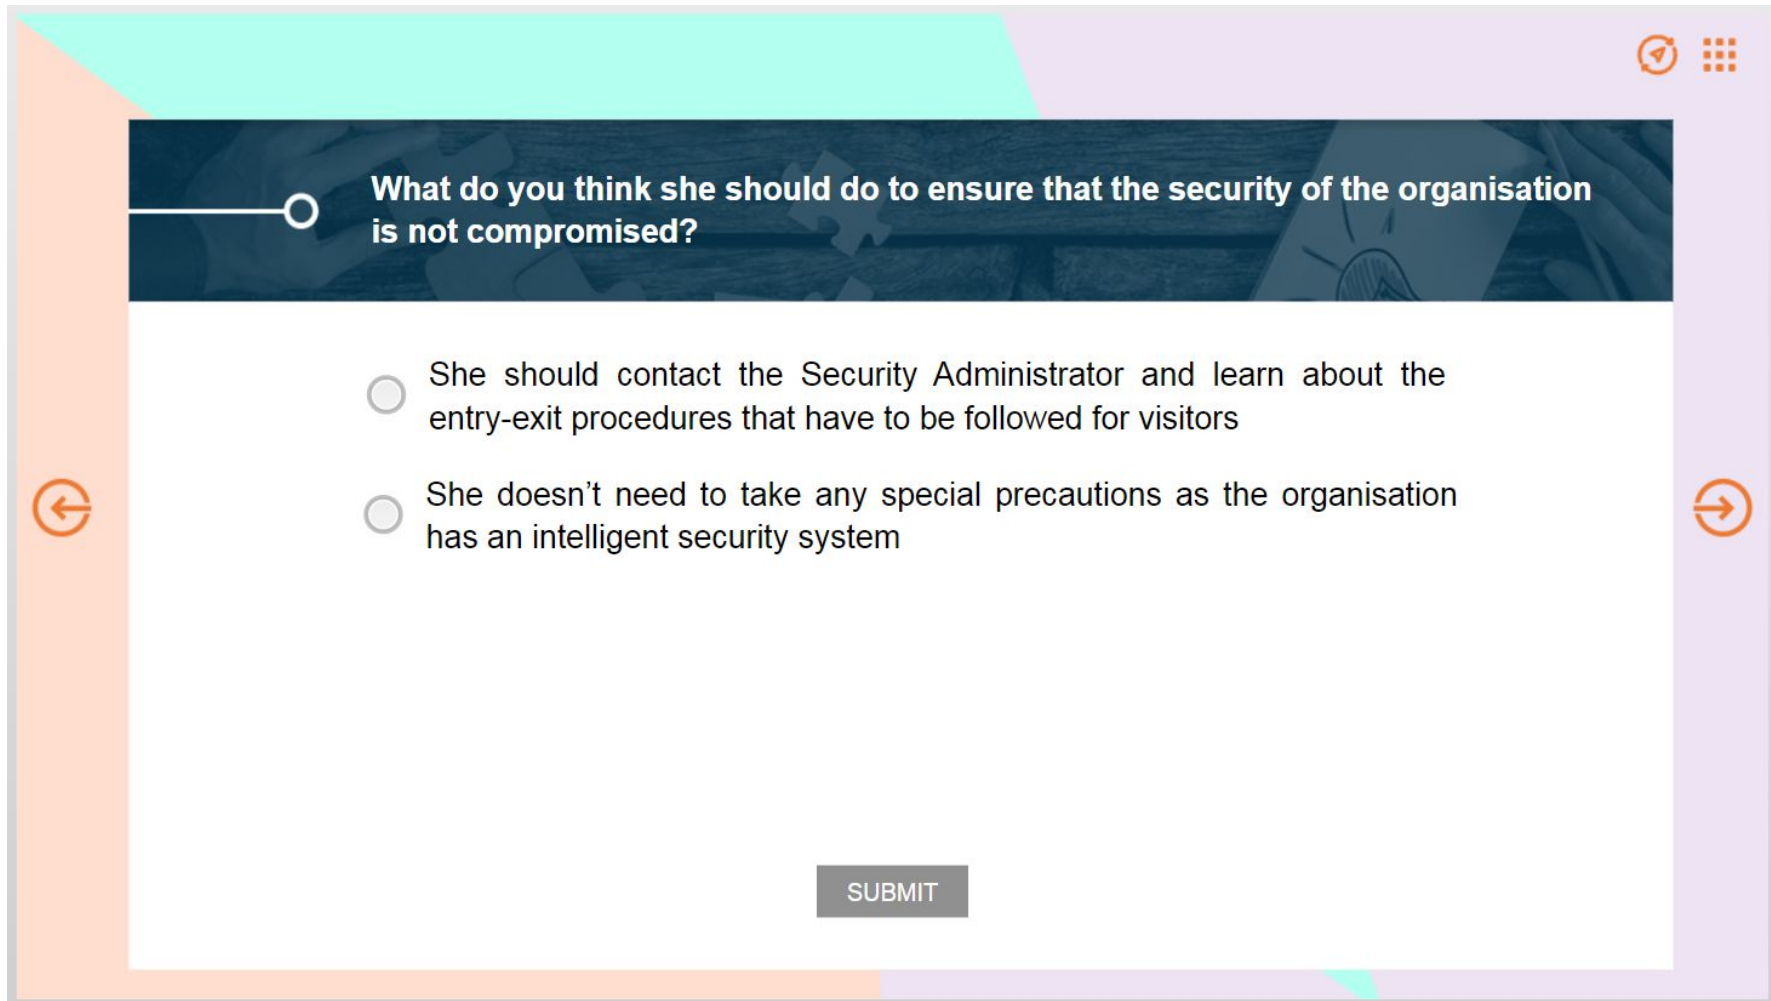

Don'ts

- Do not allow visitors in secure areas unescorted
- Do not reveal the locations of secured areas to unauthorised persons
- Do not bring personal storage media into organisation premises unless authorised by security officer
- Do not leave laptops unattended in public places or in parking areas
- Do not leave confidential information unattended on table or desk

Physical Security

Physical Security

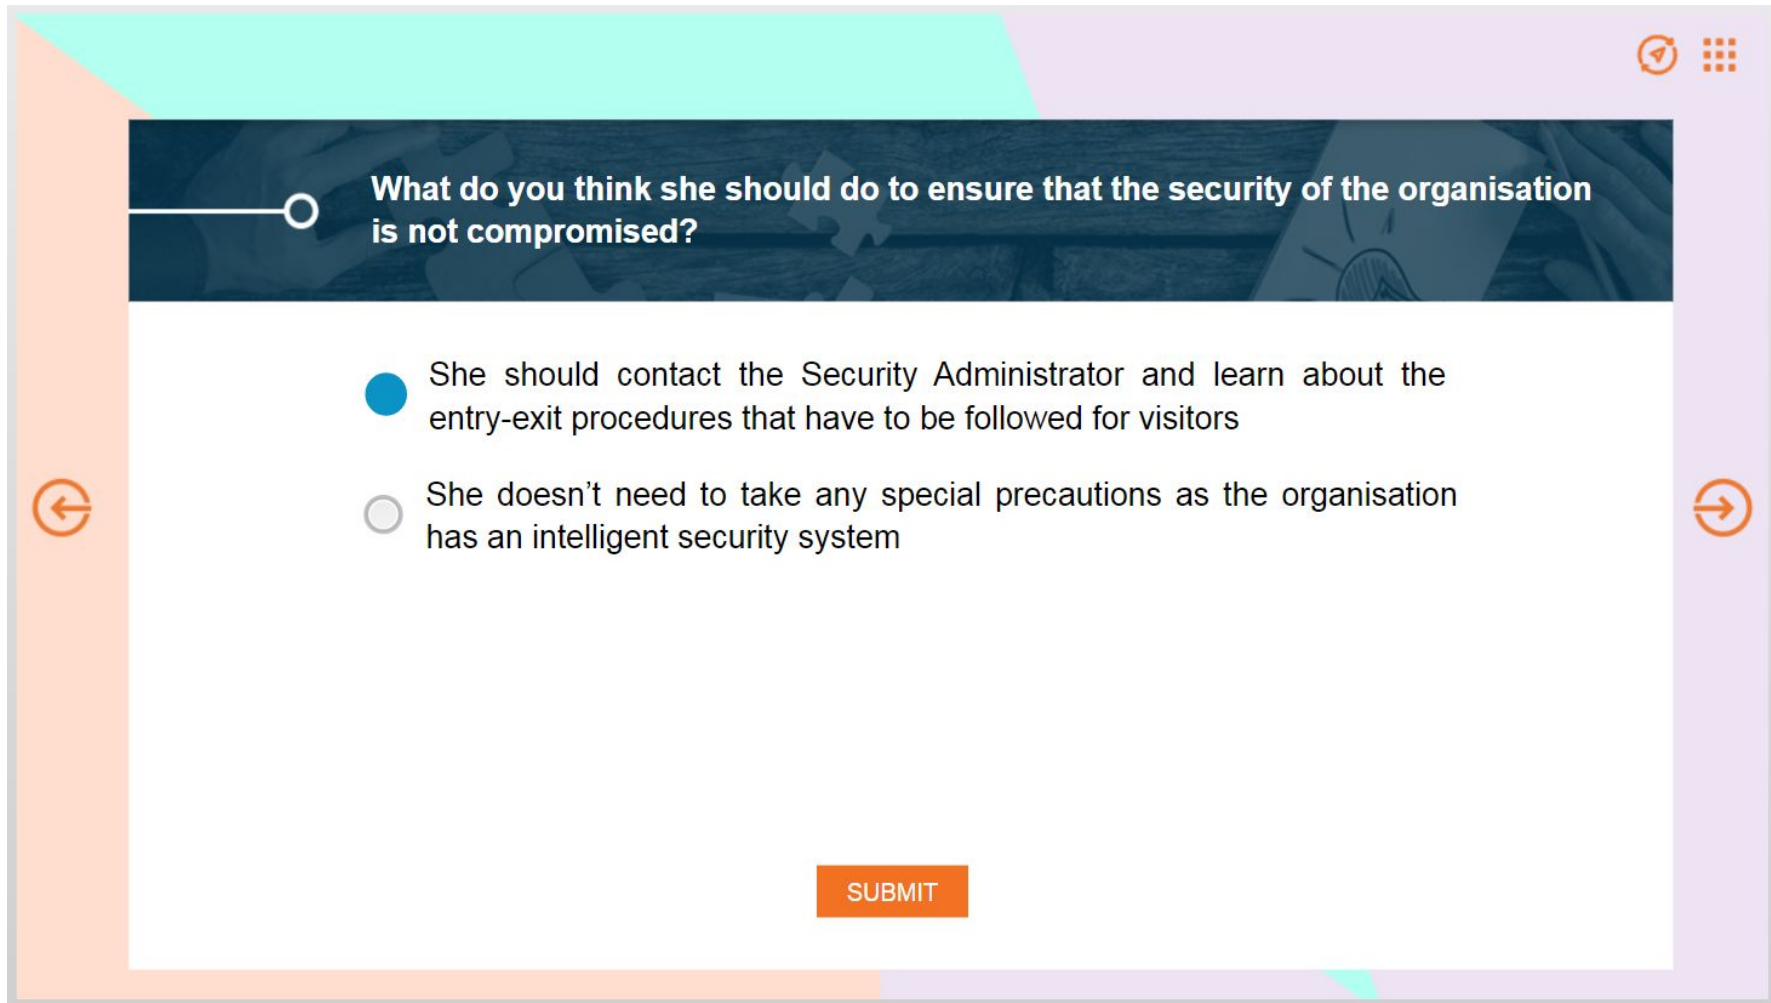

What do you think she should do to ensure that the security of the organisation is not compromised?

- ☐ She should contact the Security Administrator and learn about the entry-exit procedures that have to be followed for visitors
- ☐ She doesn't need to take any special precautions as the organisation has an intelligent security system

SUBMIT

Physical Security

The quiz interface features a dark blue header bar with the question text. Below the header is a white area containing two radio button options. The interface is framed by a light purple border with orange navigation icons (back, forward, and a grid) on the right side and a back icon on the left side. A blue circle indicates the selected option.

What do you think she should do to ensure that the security of the organisation is not compromised?

- ☒ She should contact the Security Administrator and learn about the entry-exit procedures that have to be followed for visitors
- ☐ She doesn't need to take any special precautions as the organisation has an intelligent security system

SUBMIT

Physical Security

The screenshot shows a quiz interface with a dark background. At the top, a question is displayed: "What do you think she should do to ensure that the security of the organisation is not compromised?". Below the question, a green bar indicates "That is correct". Underneath this, a list of options is shown, with the first option, "Correct. She should contact the Security Administrator to learn about the entry-exit procedures that need to be followed for visitors.", being the correct answer. At the bottom of the quiz area, there is an orange "NEXT" button and a faint "SUBMIT" button.

What do you think she should do to ensure that the security of the organisation is not compromised?

That is correct

- Correct. She should contact the Security Administrator to learn about the entry-exit procedures that need to be followed for visitors.

Physical Security

Physical security risks

Lapses in physical security can result in:

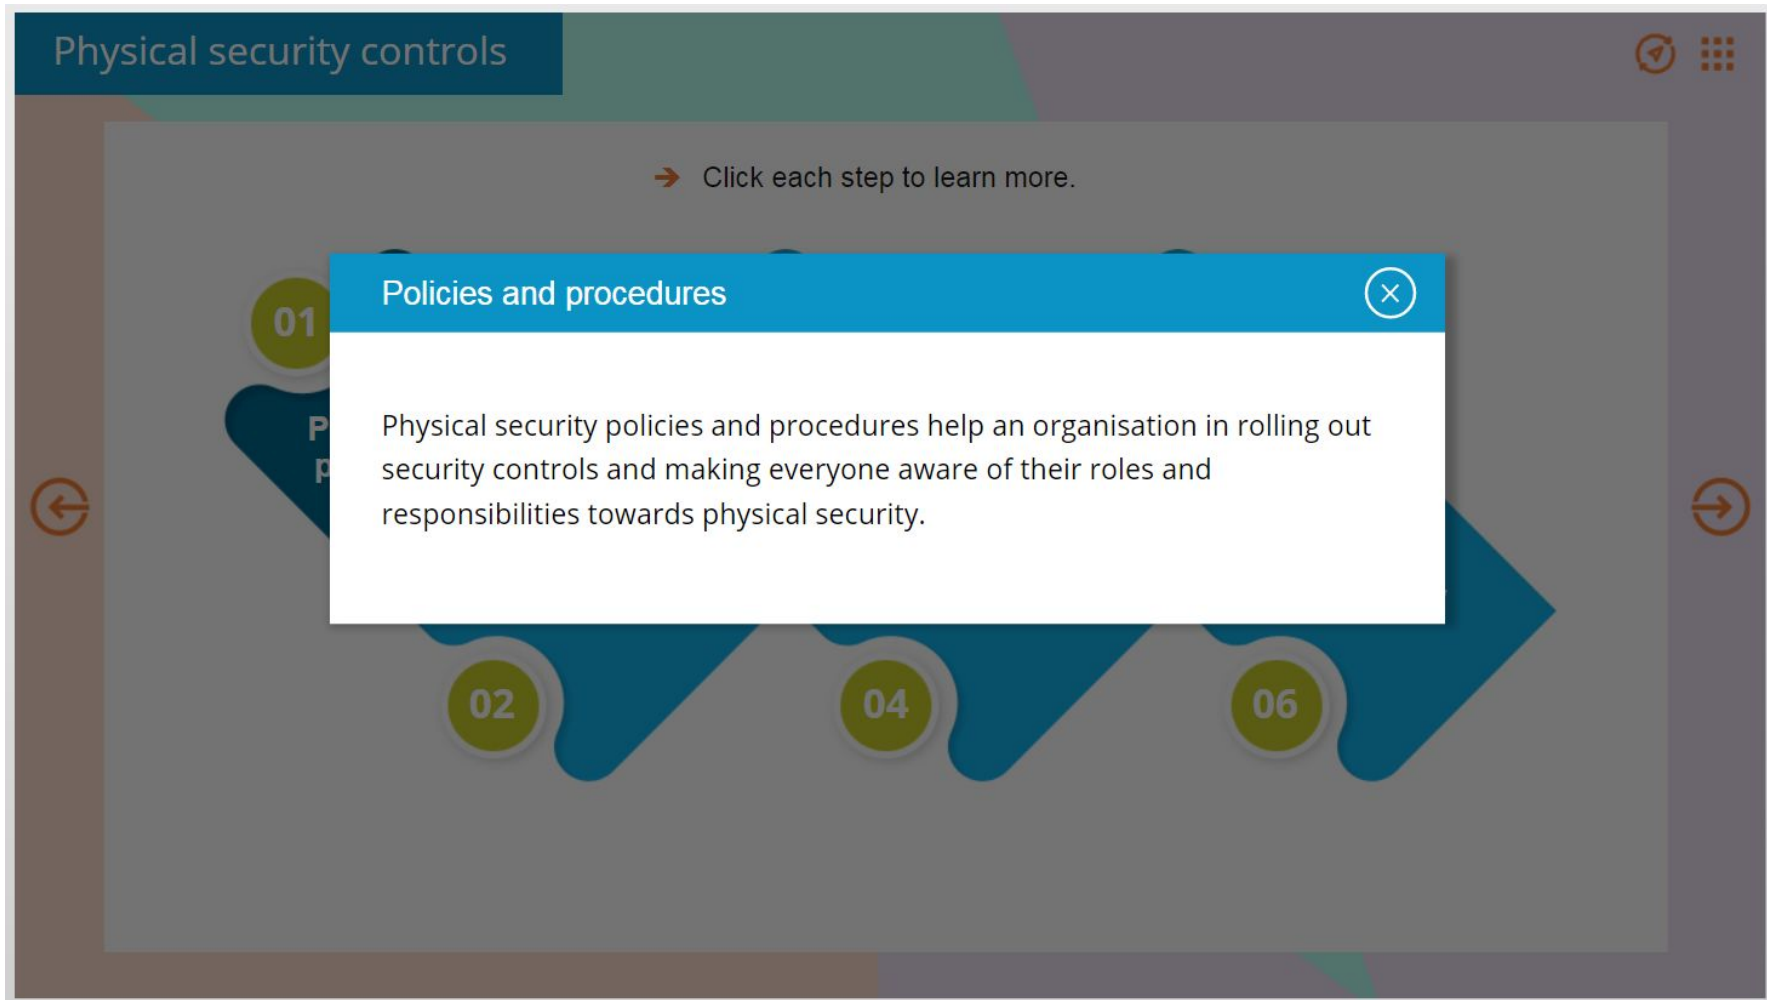

- 01** Theft of organisation assets such as laptops, prototypes and so on
- 02** Theft of highly confidential organisation data like formulae, financial information, Intellectual Property Rights etc
- 03** Equipment may be damaged and information lost due to disasters such as fire, or acts of sabotage and vandalism
- 04** Unavailability of organisation premises or key facilities or systems
- 05** Breach of secure areas like server room, R & D facilities, data centres, etc
- 06** Corporate espionage
- 07** Unauthorised access to facility

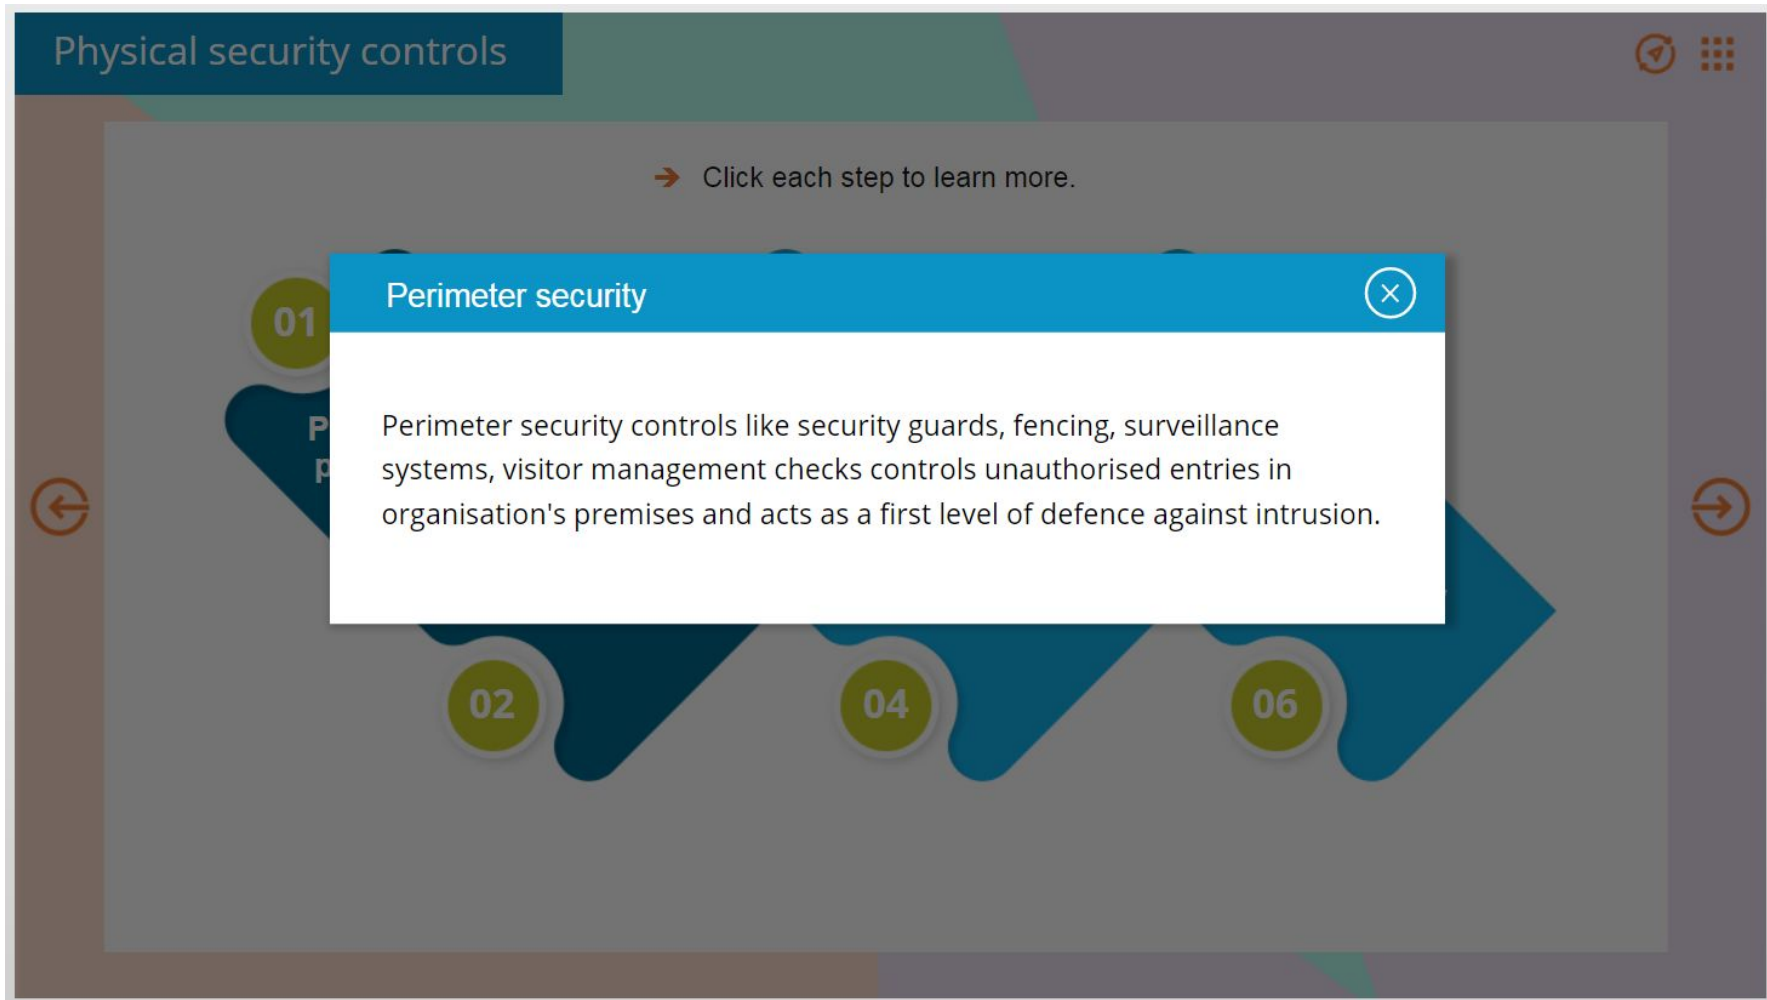

Physical Security

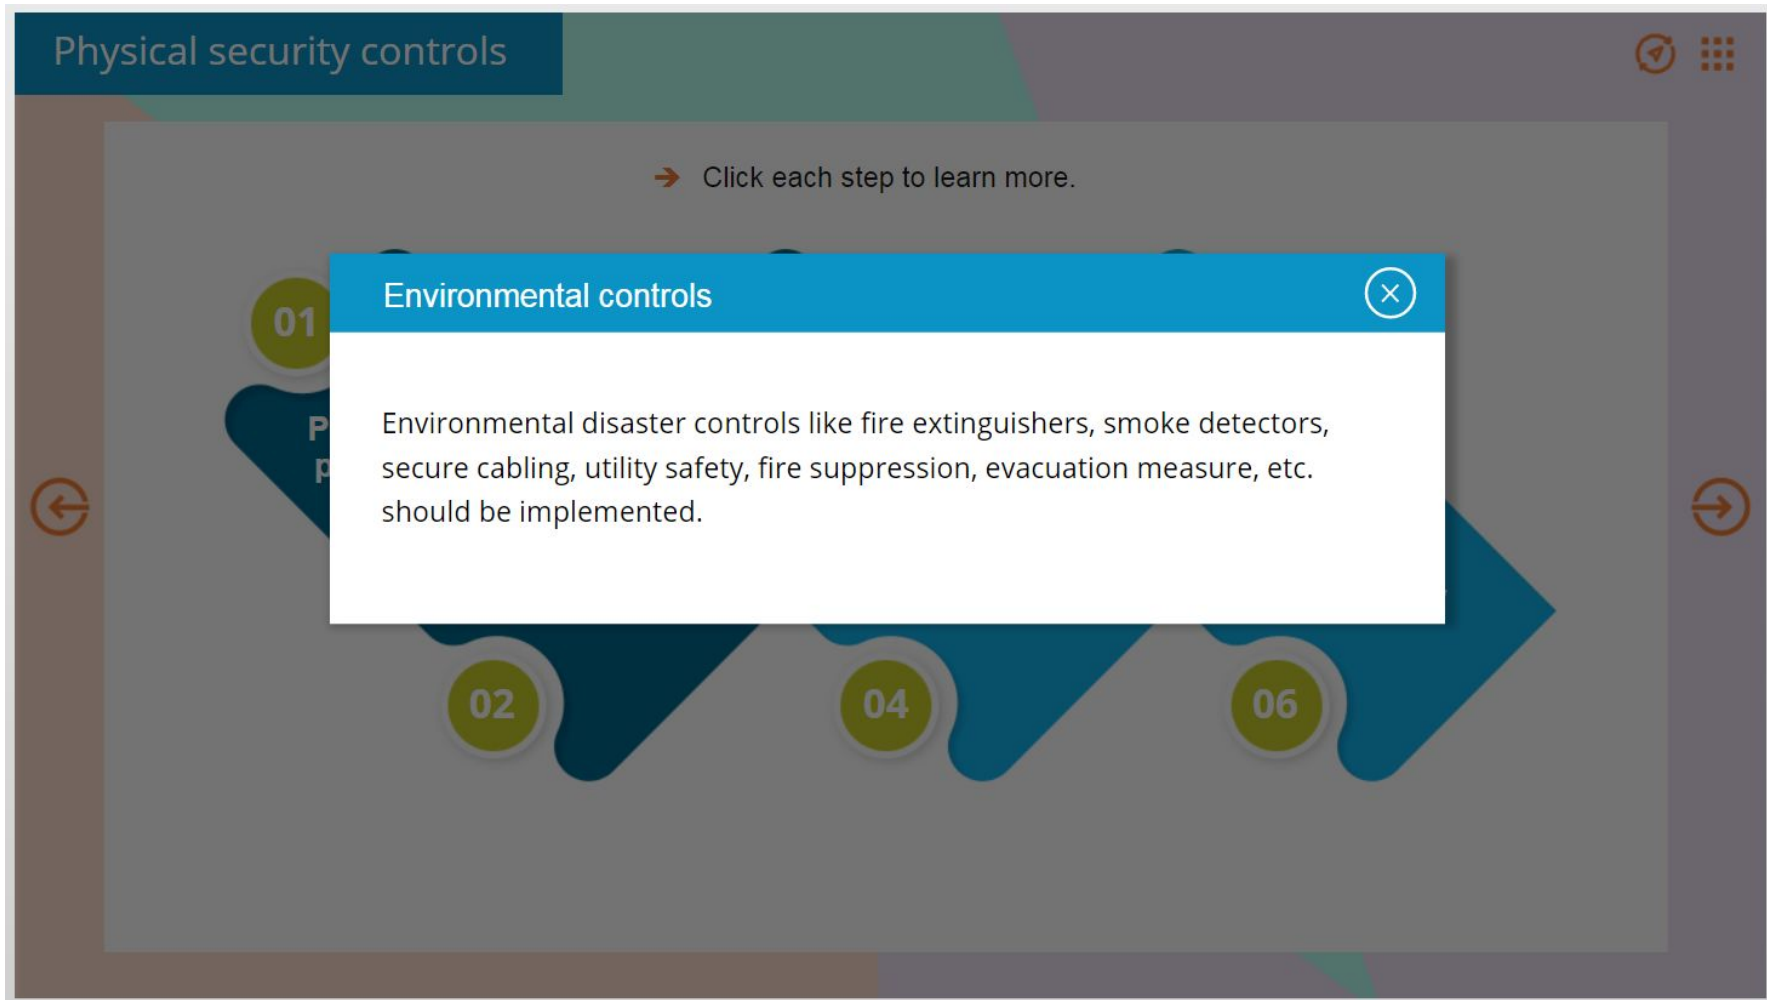

Physical Security

The diagram illustrates a sequence of physical security controls. A blue header bar at the top left contains the text "Physical security controls". Below this, a grey rectangular area contains a series of steps represented by green circles with numbers. Step 01 is highlighted with a blue background. A white modal box is overlaid on step 01, containing the title "Secure area surveillance" and a close button (X). The modal text states: "Secure areas of an organisation like data centres, should be defined and monitored using surveillance cameras and notification systems." The background diagram also shows steps 02, 04, and 06, and a large blue arrow pointing right. Navigation icons (back, forward, search, and a grid) are visible in the top right and bottom left corners of the diagram area.

Physical security controls

→ Click each step to learn more.

01

Secure area surveillance

Secure areas of an organisation like data centres, should be defined and monitored using surveillance cameras and notification systems.

02 04 06

Physical Security

The screenshot shows a digital interface titled "Physical security controls" in a dark blue header. Below the header, a grey area contains a sequence of steps represented by green circles with numbers. Step 01 is partially visible on the left. A large blue arrow points from left to right across the middle of the interface. A white pop-up window with a blue header titled "Disaster Recovery" is centered over the interface. The pop-up contains text about disaster recovery policies. In the background, steps 02, 04, and 06 are visible. Navigation icons (back, forward, and a grid) are located in the top right corner of the interface.

Physical security controls

→ Click each step to learn more.

Disaster Recovery

Disaster recovery policies and procedures should be developed and tested on regular basis to ensure safety of employees and organisation resources.

01 02 04 06

Physical Security

Summary

- Physical security is an important factor of an organisation's everyday operations
- Physical security of an organisation can be compromised by any individual with little or no technical knowledge
- Lapses in physical security can result in theft of organisation assets, confidential information, equipment damage, loss of resources, corporate espionage and so on
- The physical security of an organisation can be enforced through policies and procedures, environmental controls, access controls, surveillance
- Following the best practices can help to minimise the risk of security breaches in the organisation

Physical Security

Physical Security

Quiz

Consider the following scenarios. Which of these can be considered to be lapses in physical security?

- ☐ An unknown person enters the premises behind an employee who opened the door
- ☐ A visitor is being escorted by the receptionist to his meeting
- ☐ A visitor is asked to keep his USB drive with the security desk before entering company premises
- ☐ The security guard fails to issue a visitor badge to a visitor

SUBMIT

Physical Security

Quiz

A technician has just arrived to perform annual maintenance on the company's servers. Ashok is the person in charge of the maintenance of the company servers. Which of the following are the security precautions he should take before allowing the technician inside the server room?

- ☐ Ask the technician to deposit any portable media devices at the security desk
- ☐ Give the technician a keycard that allows him to access the server room at any time
- ☐ Escort the technician to the server room
- ☐ Check his company ID and validate it with the maintenance company

SUBMIT

Physical Security

Quiz

What precautions should you take to avoid lapses in physical security?

- ☐ Know where the secure areas of the building are located
- ☐ Allow a frequent visitor inside premises without following visitor access control measures
- ☐ Report an unknown person loitering around the premises to security officer
- ☐ Check if the secure room's door is fully closed before leaving
- ☐ Leave your files on workstation/desk while going out for lunch with colleague

SUBMIT

Physical Security

Quiz

Choose the correct statement:

- ☐ If an organisation has the most intelligent system, employees do not need to be on the lookout for security threats
- ☐ Employees need to be on alert for potential security threats to ensure the physical security of the organisation

SUBMIT

Physical Security

Quiz

Ryan is tasked with setting up the new server room for his organisation. Which of the following devices will help him setup environmental controls for the room?

- ☐ Fire extinguishers
- ☐ Biometric access control system
- ☐ Separate cabling
- ☐ Power backup
